6190104
putative tetrameric tRNA splicing endonuclease [imported] - Guillardia theta nucleomorph
cj.Species: nucleomorph Guillardia theta
A,Note: a nucleomorph Guillardia theta
A,Note: a nucleomorph is the vestigial nucleus of a eukaryotic endosymbiont
C,Date: 10-May-2001 #sequence_revision 10-May-2001 #text_change 24-May-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       genes of virol. 45:173-184(1983).
-i. Virol. 45:173-184(1983).
-i. FUNCTION: Seems necessary for viral DNA replication.
-i. SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Virology 183:195-205(1991).
-1- FUNCTION: Seems necessary for viral DNA replication.
-1- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=91073139; PubMed=2174965;

Submitted (AUG-1990) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Seems necessary for viral DNA replication.
-!- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                       MEDLINE=88062992; PubMed=2824850;

-I- SUBCELLULAR LOCATION: Nuclear (By similarity).
-I- TISSUE SPECIFICITY: Expressed in the developing and adult retina.
Also expressed in the hypothalamic and the pituitary regions.
-I- SIMILARITY: Belongs to the SIX/Sine oculis homeobox family.
-I- SIMILARITY: Contains 1 homeobox domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
"Six9 (Optx2), a new member of the six gene family of transcription factors, is expressed at early stages of vertebrate ocular and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Developmental protein; Homeobox, 2; 1.

MEDLINE=9910672; Lanew member of the Six gene family of transcription factors, is expressed at early stages of vertebrate ocular and factors, is expressed at early stages of vertebrate ocular and mech. Dev. 83:155-159(1999).

I pituitary development.";
Mech. Dev. 83:155-159(1999).

- - FUNCTION: May be involved in eye development.

- - FUNCTION: May be involved in eye development.

- - TISSUE SPECIFICITY: In the developing embryo, expressed mainly in the ventral optic stalk, optic chiasma, the neural retina and the primordial tissues that give rise to the pituitary/hypothalamus axis. Not expressed in the lens placede.

- - DEVELOPMENTAL STAGE: Expression is first detected in the embryo at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. "Identification of a human homologue of the sea urchin receptor for egg jelly: a polycystic kidney disease-like protein.";
Hum. Mol. Genet. 8:543-549(1999).

-!-FUNCTION: May have a central role in fertilization. May generate a Ca(2+) transporting channel directly involved in initiating the acrosome reaction of the sperm.
-!-SUBUNIT: May form homomultimers or heteromultimers in combination with an as yet unidentified subunits.
-!- DEVELOPMENTAL STAGE: Expression begins at about 2 weeks and continues into adult life, mirroring the production of mature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 POLYCYSTIC KIDNEY DISEASE AND RECEPTOR FOR EGG JELLY RELATED PROTEIN.

Sequence 11397, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: PUEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US 60/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
ENGINE 203

LENGTH: 203
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SQUERAL INFORMATION:

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The parvoviridae family cantains two groups that infect mammalian hosts: (i) defective (helper-dependent) adeno-associated viruses, and (ii) autonomous (helper-independent) parvoviruses. MVM is a member of the latter group. Both groups have been demonstrated to gackage both plus and minus strands (in separate particles) of the ss-DNA genome, though the minus strand is more typically packaged in the latter group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Treplication [1].

The left and right halves of the genome encode two distinct, but overlapping transcriptional units. The transcripts can be summarized [1] (1 map unit (mu) = 51 bp):

R1 (4.8 kb): 4.5 mu - 46 mu; 46 mu - 95 mu
R2 (3.3 kb): 4.5 mu - 10.7 mu; 38 mu - 46 mu; 46 + mu - 95 mu
R3 (3.0 kb): 40 mu - 46 mu; 46 + mu - 95 mu
R3 is the major transcript.

R3 is the wajor open reading frames, both on the plus (or C) There are two major open reading frames, both on the plus (or C) after and. The left side ORF (261-2279) probably encodes a non-capsid protein of 85 kd; the right side ORF probably encodes the viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence below corresponds to the plus (+) strand, also referred to as the C-strand. The minus (-) strand is also referred to as the V-strand.

The 3' and 5' termini both exhibit the potential for forming stable 'fold-back' hairpins; these sequences appear to play a role in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Three splicing patterns are used to excise the small intron common to all minute virus of mice RNAs J. virol. 60 (3), 1170-1174 (1986)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Original source text: Minute virus of mice (strain MVM(p)), passed
